SUPPLEMENT TO
REPORT NO.

**RETURN TO CIA
LIBRARY**

THIS DOCUMENT CONTAINS INFORMATION AFFECTING THE NATIONAL DEFENSE OF THE UNITED STATES WITHIN THE MEANING OF THE ESPIONAGE ACT SO U. S. C. 91 AND 92, AS AMENDED. ITS TRANSMISSION OR THE REVELATION OF ITS CONTENTS IN ANY MANNER TO AN UNAUTHORIZED PERSON IS PROHIBITED BY LAW. REPRODUCTION OF THIS FORM IS PROHIBITED.

THIS IS UNEVALUATED INFORMATION

A study group was formed from among engineers of the Siemens & Halske Firm in Berlin in July 1945. This group, which was called Central Laboratory, was allocated rooms at the AEG Plant in Oberschoeneweide. The head of this organization was a Soviet, called Yarmolayev, (fnu), who was technically rather inefficient. On the basis of rough specification data, various modern carrier frequency systems were designed and experimental prototypes were built, for instance for lines with 12 and 24 channels and for coaxial cables with up to 400 channels. The designs and prototypes were turned over to the Soviets immediately after completion. After mid-1949, the Soviets lost interest in these activities and the AEG Plant in Oberschoeneweide was used more and more for civilian production. The production of amplifier tubes was also taken up.

* [] Comment. More comprehensive and exact data than those contained in the present report were transmitted on the developmental activities of the laboratory of the Ochsenssee Plant. []

The organization mentioned in the present report is therefore believed to have been only a small group working in this pilot plant.

Comment. This statement indicates that the Soviets are producing satisfactory carrier frequency systems in their own country. The statement can also be taken as a confirmation of previous information, that in late 1949, the Soviets began to transfer those sections of the research organization in which they were still interested to the premises of the Knorr **Bremse** plant. **It is believed that** these sections were concerned chiefly with research work on radar techniques.
